

Grant Agreement 101249337 — JUST AI-BLOC EU
Judiciary Utilising Smart Technologies: AI and Blockchain for Optimised
Compliance in the EU

TRAINING CALENDAR

The project is financed by the European Union's Justice programme (JUST-2025-JTRA) and is designed as a progressive learning journey on AI and Blockchain technology vis-à-vis the justice sector in the EU.

Since these are distinct (yet complementary) technologies, the project relies on a modular-based learning and comprises three modules:

- **Module I on Navigating AI in the EU** focuses on AI and its implications for the justice sector in civil and criminal matters.
- **Module II on Navigating Blockchain Technology in the EU** addresses Blockchain technology, emphasising its role in digital identity, smart contracts, and judicial processes.
- **Module III on Conclusions** consolidates the learning outcomes, fostering dialogue and forward-looking discussions at the final conference

Modules I and II each follow a competency-based progressive structure, allowing participants to build foundational knowledge before engaging in more advanced and specialised discussions. Each Module comprises three progressive phases including: a Legal English seminar; Train the Trainers workshops; a series of interprofessional regional Conferences.

The **Legal English seminars** are meant to equip **judges, prosecutors, lawyers, and judicial officers** with the legal, technical, and linguistic competencies necessary to understand and interface with AI and Blockchain technology and the relevant regulatory framework in their daily work

The **Train the Trainers workshops** are designed to build the participants' capacity to navigate complex regulatory texts and effectively communicate specialised concepts. These workshops integrate adult learning principles, interactive teaching methods, and curriculum design strategies tailored for legal professionals. They rely on practical exercises, scenario-based learning, and simulation techniques to reinforce knowledge acquisition and application

The programme then advances to a series of interprofessional regional Conferences focused on practical implementation within the legal profession. These conferences serve as a critical platform for participants to translate theoretical knowledge into practical legal applications, encouraging cross-border dialogue, and creating an ecosystem where legal and technical experts interact and share best practices
